

# Aquarium Corrosion and Leak Prevention

Aquariums across the nation including the Monterey Bay Aquarium, Portland Zoo, Chicago's Shed Aquarium and the National Aquarium in Baltimore, have chosen the AquataPoxy line for new installation and rehabilitation of aquatic exhibits.

Environmentally friendly by design, AquataPoxy 100% solids moisture tolerant epoxies are non-toxic and solvent-free, emitting no VOCs.

AquataPoxy superior performance coatings produce a smooth, porcelain-like finish that seals porous surfaces. The ultra high-build applications not only stop leaks and corrosion, but also improves water quality, ease in cleaning and a reduction in chemical usage.

Fast setting properties enable increased production and a quick return to service, especially when spray-applied. We can even help tackle underwater applications when needed.
